Introduction to Tensor Calculus for General Relativity

special relativity This is Einstein's famous strong equivalence principle and it makes general relativity an extension of special relativity to a curved spacetime The third key idea is that mass (as well as mass and momentum flux) curves spacetime in a manner described by the tensor field equations of Einstein

INTRODUCTION TO GENERAL RELATIVITY

General relativity is a beautiful scheme for describing the gravitational field and the equations it obeys Nowadays this theory is often used as a prototype for other, more intricate constructions to describe forces between elementary particles or other branches of fundamental physics This is why in an introduction to general relativity it is of

(relativity being too controversial then) Einstein wrote two theories of relativity; the 1905 work is known as "special relativity" because it deals only with the special case of uniform (ie non-accelerating) motion In 1915 he published his "general theory of relativity", dealing with gravity and acceleration Strange things happen in acceleration
