and present the solutions to a set of problems, which are similar to the homework problems, on a particular chapter five times throughout the semester. The sets of problems are posted under the ClassLecture Notes webpage, and students in the same group will receive the same grade for the assignments based on the correctness of the answers to

CS 466/666: Introduction to Formal Languages

will examine methods for defining syntax of languages and recognizing patterns: the syntax of languages can be defined using grammars and patterns accepted by finite state machines. Along with presenting the fundamentals of these two topics, the course will develop and investigate the relationships between language definition and pattern recognition.
